

GOVERNMENT COMPLIANCE PORTAL

DigiPermit

User Roles Guide — What each role does, why it exists, and how it supports the capstone project

DigiPermit is a multi-organisation platform that helps employers, universities, clinics, officers, and foreign nationals **record, monitor, verify, and report** on permit compliance — with audit trails, alerts, and analytics.

Academic simulation: DigiPermit does not issue official government visas. It demonstrates how digital compliance *could* work.

Module alignment

- **IS3** — BPMN processes, 3NF database, analytics, IoT checkpoint demo
- **IP2** — REST API (40+ endpoints) + Ionic/Angular frontend
- **DS3** — Agile delivery, testing, GitHub collaboration

Permit lifecycle (who touches the system)

PLATFORM GOVERNANCE

System Administrator

What: Creates organisations and user accounts; views platform-wide dashboards, verification logs, analytics, and IoT devices.

Why: Someone must own and provision the system — without admin, no other role can log in.

→ Proves multi-tenant governance, RBAC, and FR-3 user/org management.

WORK VISA COMPLIANCE

Employer HR Officer

What: Registers foreign employees, captures work permits, monitors expiry, handles renewals, verifies at reception (manual/QR).

Why: Employers are responsible for knowing employees' permit status — main data-entry and day-to-day compliance role.

→ Core use case UC-01; organisation-scoped data; drives permits, alerts, notifications.

STUDY VISA COMPLIANCE

University Officer

What: Monitors international students and study permits; dashboard and verification at international office.

Why: Universities face the same compliance challenge as employers, for study visas.

→ Shows multi-organisation-type design (not employer-only).

HEALTHCARE MONITORING

Clinic Administrator

What: Lists patients and permits; org dashboard; verify documents at clinic desk.

Why: Clinics may need to confirm immigration document status before care or reporting.

→ Extends compliance to healthcare stakeholder (process variety for IS3).

SELF-SERVICE

Foreign National

What: Views own permits only, digital permit + QR, notifications, renewal/update requests.

Why: The permit holder should see status and warnings; reduces HR load and improves transparency.

→ Self-scoped access (privacy); renewal BPMN; completes post-validation lifecycle.

CHECKPOINT OPERATIONS

Verification Officer

What: Manual lookup, QR scan, RFID simulation; instant valid/expired/revoked result; certificate PDF; own scan logs & analytics.

Why: Compliance requires real-time checks at gates/reception — not only database storage.

→ Verification engine + immutable audit logs; IoT demo (IS3); strongest live demo role.

SIMULATED GOVERNMENT REVIEW

Immigration Officer

What: Validates or rejects pending permits; reviews suspicious activity and renewal queue.

Why: Records must be approved before treated as active — mirrors pending → active in BPMN.

→ Simulated oversight (not real Home Affairs); links capture to trusted active status.

EXECUTIVE OVERSIGHT

Manager / Auditor

What: Read-only analytics, AI executive insights, charts, role-scoped PDF reports — cannot change operational data.

Why: Leadership needs visibility without operational power (separation of duties).

→ IS3 reporting + Power BI story; least-privilege audit access.

Role	Scope	Changes data?	Project value
System Admin	Whole platform	Yes	Setup & governance
Employer HR	One employer	Yes	Core permit capture
University Officer	One university	Yes	Education sector
Clinic Admin	One clinic	Yes	Healthcare sector
Foreign National	Self only	Limited	Self-service & privacy
Verification Officer	Own scans	Logs only	Real-time verify + audit
Immigration Officer	Platform review	Yes	Approval workflow
Manager / Auditor	Read-only	No	Analytics & reporting

Why eight roles? Each maps to a real stakeholder: who records, who approves, who carries the permit, who checks on the day, who runs the platform, who reports. That demonstrates multi-user RBAC, process integration, and auditability required by the major project.

Demo access for your group

URL: `https://mrntuli.github.io/DPermit/`

Password (all demo users): `Demo@12345`
